(multiple choices)

Why 16,6% of teams are not moving to Git?

Breaking changes to the existing VCS infrastructure impose high risks.
Cut-off migration may cause delays in production and data loss.

Real SVN repositories are complex and huge.
Simple migration tools are often not ready to migrate your particular SVN repository to Git.

Teams can't just master Git overnight.
Adopting to the new workflow takes time.

Most migration tools are community-developed.
There's no professional support.

Good news!

SVN Mirror is a tool for smooth, stress-free migration from SVN to Git.

This add-on creates a two-way mirror between SVN and Git repositories, and allows you to work with both systems simultaneously. All new SVN revisions are immediately tranferred to Git, and vice versa. Migrate gradually and use both SVN and Git until your team is 100% happy!

> We could stand up these Git mirrors and slowly migrate repositories, teams and infrastructure. The migration could take as long as it needed as neither Subversion nor Git were impacted by the presence of the other

Don't shut down production and wait for new infrastructure to be set up.
Leave your SVN settings intact and move the issue tracker, the build server and the backups to Git one by one.

Flexible mirror settings

- Customizable branches/tags mapping;
- Auto-generated mapping based on existing SVN history;
- REST API to configure and maintain mirrors.

> A really beautiful plugin. It helps migrating SVN repositories to git in a really easy way. One of the most important part is how easy you can set the authors if they are no longer in your company.

> The plugin makes very large code base migrations easy to handle. We can focus on managing the humans, instead of the code.

Each developer doesn't have to learn and run "git-svn" — the mirror is server-based, once and for all. And old-school developers can keep using SVN for as long as they like.

The customer support by TMate Software is amazing. The team did a fantastic job of analyzing our issues, asking the right questionsto get to the real issue, and provided excellent resources for us to analyze the issues.

Extremely responsive developer. The plugin has been flawless. In one case the developer was kind enough to walk us through the issue, why it occurred, and then released an updated version of the plugin that properly identifies these cases and avoids them.
